

# Question(class-02)

## 1. Python Strings

- **Question:** How can you create a string variable in Python that contains the text "Hello, World!"?

## 2. Slicing Strings

- **Question:** Given the string `text = "PythonProgramming"`,
- Print this `"Progra"`

## 3. Modify Strings

- **Question:** How can you convert the string `"python programming"` to all uppercase letters?

## 4. Concatenate Strings

- **Question:** If you have two strings, `str1 = "Hello"` and `str2 = "World"`, how can you concatenate them with a space in between?

## 5. Format Strings

- **Question:** How can you use the `format` method to include the values of two variables, `name = "Alice"` and `age = 30`, in the string `"My name is {} and I am {} years old."`?
